# RYAN CHEN

516-838-2028 | ry.chen2004@gmail.com | LinkedIn | GitHub

## Education

**Northeastern University** Boston, MA

*Bachelor of Science in Computer Science – GPA: 3.6/4.0* *Expected Dec 2026*

**Honors:** Dean's List

## Technical Skills

**Languages**: Java, Python, TypeScript, C++, SQL, C#, HTML, CSS

**Frameworks**: React.js, Next.js, Tailwind, .NET, Angular, Jupyter, Pandas, Numpy, Scikit-learn, Swing, JUnit, Jest

**Tools**: Claude, GitHub Copilot, Microsoft Copilot, AWS S3, Bedrock, & EC2, Jenkins, Jira, MongoDB, VSC, Snowflake, Git, GitHub, Bitbucket, Confluence, Postman, Bamboo, Elasticsearch, Opensearch

## Experience

**Babel Street** – *Software Engineer Co-op* Jan - Jun 2026

- Designed and developed Region of Origin classification feature to improve matching of multi-regional names, including SDK integration, testing, license gating, and packaging
- Built a multilingual person-name data pipeline in Python by parsing a Wikidata dump, merging and deduplicating multilingual name records
- Collaborated on an LLM-agent vendor vetting tool at a company hackathon, featuring an agentic workflow with sanctions screening, entity relationship graphing, and risk scoring
- Led Java 25 migration across five repositories; surfaced Solr and OpenSearch Security Manager compatibility blockers that shaped the team's runtime roadmap
- Improved API error-code accuracy on REST API endpoints and back-ported the fix across multiple release branches in both Elasticsearch and OpenSearch plugins

**Verisk Analytics Inc.** – *Junior Software Developer Co-op* Jan - Jun 2025

- Designed and implemented a modular, reusable Secure Internal API framework — from proof of concept to deployment — standardizing token management and authentication across **10+** services
- Contributed to the development of SFPublish, an internal API that facilitates data transfers from S3 to Snowflake; enabling the ability of ingesting JSON-formatted files
- Developed an automated API deployment script and migrated legacy scripts from shell to Python, improving maintainability and deployment speed by **30%**
- Built and maintained Snowpipes to automate ingestion of files from S3 into Snowflake for users, supporting a fully operational end-to-end data pipeline

**Scout** – *Senior Developer* Sep 2025 - Present

- Co-led development of a React/Tailwind frontend for NUMAC, Northeastern's student marketing consultancy, managing a 3-person junior dev team to build a client-facing project portfolio
- Built React-based frontend for 3 Stones, a real-estate startup, implementing mobile application from high-fidelity mockups and landing page with waitlist functionality, serving as the primary user acquisition channel for pre-launch

**Ventus Health** – *Project Manager Assistant* Jun - Sep 2024

- Collaborated in the design and development of a mobile application aimed at connecting over 100+ patients with local healthcare providers, inspired by Zocdoc

## Projects

**CodeStack** | *React.js, TypeScript, MongoDB, Socket.io, CSS, Jest* Oct - Dec 2025

- Implemented social networking features including follow/unfollow system with real-time updates via Socket.io, direct messaging with privacy settings, and inline follow buttons on user lists, reducing navigation time by **60%**
- Developed two-factor authentication with QR code integration and session timeout system with warning modals, while redesigning application UI with centralized CSS variable system to maintain consistent purple gradient theme across **15+** components

**Fakebook Crawler** | *Python, Git* Mar - Apr 2024

- Created a web crawler in Python, capable of navigating through secure HTTPS connections using SSL, handling session management, and parsing HTML to efficiently extract secret flags from a simulated social media site

**Hexagonal Reversi** | *Java, Swing, Git, Junit* Nov - Dec 2023

- Developed a feature-rich Java implementation of Reversi on a hexagonal grid, utilizing Swing for a graphical user interface (GUI) and engineering a text-based view; applied advanced design patterns including MVC architecture, observer pattern, strategy pattern, and adapter pattern, ensuring modularity and maintainability of the codebase
