RYAN CHEN

516-838-2028 | ry.chen2004@gmail.com | linkedin.com/in/chen-ryan1 | github.com/rchen2004

Education

Northeastern University Boston, MA

Bachelor of Science in Computer Science – GPA: 3.6/4.0 *Expected Dec 2026*

Honors: Dean's List

Relevant Coursework: Software Engineering, Web Development, Object-Oriented Programming, Algorithms & Data

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, SQL, C++, HTML, CSS
Frameworks & Libraries: React.js, Next.js, Node.js, Express, Tailwind CSS, Socket.io, Pandas, NumPy, JUnit, Jest
Cloud & Data: AWS (S3, EC2, Bedrock), Snowflake, MongoDB, Elasticsearch, OpenSearch
Developer Tools: Git, Docker, Jenkins, Bamboo, Postman, Jira, Claude Code, GitHub Copilot

Experience

Babel Street – *Software Engineer Co-op | Java, Python, Elasticsearch, OpenSearch, Jenkins* Jan 2026 - Jun 2026

- Shipped a Region-of-Origin classifier answering an enterprise customer's top accuracy complaint, validated on **600** multi-regional names, by building its SDK endpoint, CLI, ranked top-k predictions, and license gating
- Fixed **4** customer-reported name-matching defects, including a cross-script false 100% match and a numeric leet-speak crash, by tracing normalization logic in the Java engine and adding regression tests
- Produced **13** multilingual person-name dictionaries (∼**100K** records) covering **20+** languages by building Python pipelines that parse the Wikidata dump, merge OFAC-translated lists, filter by script, and deduplicate entries
- Migrated **5** repositories to Java 25, including both search plugins, by updating builds, Docker images, and Jenkins CI/CD, surfacing Solr and OpenSearch Security Manager blockers that shaped the team's runtime roadmap
- Corrected HTTP status codes on dynamic-config REST endpoints from 500 to 400/422 by remapping exception handling and adding integration tests, then back-ported to **5** Elasticsearch and OpenSearch release branches
- Placed **2nd** of 8+ teams at a company hackathon by building the OFAC sanctions-screening tool for an LLM-agent vendor-vetting workflow with entity relationship graphing and risk scoring

Scout – *Senior Developer | React.js, TypeScript, Tailwind CSS* Sep 2025 - Present

- Co-led a 3-dev team building a React/Tailwind client portfolio site for NUMAC, a student marketing consultancy
- Built a React mobile app and landing page from high-fidelity designs for 3 Stones, a pre-launch real-estate startup
- Redesigning the Shopify storefront for Purely Puff'd Up, a small-business client (in progress)

Verisk Analytics Inc. – *Junior Software Developer Co-op | Python, SQL, AWS, Snowflake* Jan 2025 - Jun 2025

- Standardized token management and authentication across **10+** internal services by designing a modular, reusable Secure Internal API framework and owning it from proof of concept through production deployment
- Extended SFPublish, an internal S3-to-Snowflake API, from CSV-only to JSON ingestion by designing the SQL schema and delimiter configuration on the existing parser, so teams could publish JSON without conversion
- Cut per-endpoint API deployment time by **30%** by writing a Python deployment script that stores base endpoints and login credentials, and migrated legacy shell scripts to Python for maintainability
- Automated customer data ingestion into Snowflake by building an event-driven Snowpipe pipeline from S3, defining the expected data schema, and validating that uploaded files auto-created and populated tables

Ventus Health – *Project Manager Assistant* Jun 2024 - Sep 2024

- Designed the landing page and contact form for a Zocdoc-style patient booking app based on competitor research

Projects

CodeStack | *React.js, TypeScript, Node.js, Express, MongoDB, Socket.io, Jest* Oct 2025 - Dec 2025

- Cut the steps to follow a user by **75%** (4 to 1) by adding inline follow buttons on user lists, alongside a real-time follow/unfollow system over Socket.io and direct messaging with per-user privacy settings
- Implemented two-factor authentication with QR-code enrollment and session timeouts with warning modals
- Unified styling across **15+** components by replacing ad hoc styles with a centralized CSS variable theme system
